of accomplishment, Mrs. Dickson and her late husband, William James Dickson, owned the Darlington Hardware. Mrs. Dickson was a member of the Darlington Presbyterian Church and active for years with the American Legion Auxiliary. In the past few years she resided at the Methodist Manor in Florence, South Carolina and then at Agape Senior Care in Irmo, South Carolina.

One of twelve children, Nettie DuRant Dickson is survived by sibling Marion DuRant, daughters Elizabeth Betty DuPre and Jeanette D. Renfrow, numerous nieces and nephews, four grandsons, and three great-grandsons.

In the end, what counts most is not how long we lived, but how well. On both counts, Nettie DuRant Dickson lived a good and fruitful life.

CONGRATULATING BRIAN KLOCK

HON. PETE OLSON

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 2, 2009

Mr. OLSON. Madam Speaker, I rise today to congratulate a great public servant upon his retirement from the United States Navy—a man who has served his country diligently, my friend Brian Klock.

After 28 years of service to his country, Brian retired from his post as a Commander in the Navy on July 1, 2009. Throughout his career he served as an intelligence officer working as an analyst, an aviation intelligence officer in a P3 Squadron, and as a Naval Criminal Investigative Service (NCIS) Agent. On many occasions his service took him overseas, including during the Cold War and the Bosnian conflict.

After September 11, 2001, Brian was called to serve in NCIS and was assigned to counter intelligence operations overseas. Upon his return to the United States, Brian was asked to join the Protective Services Division. It was here that he spent two years protecting the leadership of the Department of Defense and visiting foreign military dignitaries. At the conclusion of his career, Brian was serving as the operations officer for a CENTCOM intelligence unit.

It is with great pleasure that I congratulate Brian for his years of exemplarily service to our nation. I wish him the best in his years to come and hope he lives life to the fullest during his retirement years.

EMERGENCY MEDICINE AND MEDICAL MALPRACTICE REFORM

HON. BART GORDON

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 2, 2009

Mr. GORDON of Tennessee. Madam Speaker, as we debate and move forward on this historic endeavor—passage of health care reform with a goal of improving access and coverage for the millions of uninsured and underinsured individuals—I would like to take a moment to discuss the role of emergency medicine and review the various provisions in this bill which strengthen access to emergency care. As we work to improve coverage and enhance preventive and chronic care, we must remember to balance the acute care needs of patients, especially those treated in emergency departments.

Emergency medicine is an essential part of our safety net and must be supported. Whether a patient ends up in the emergency room as the result of a suspected H1N1 influenza case, trauma, a natural or manmade disaster, or because they've lost their job and health insurance and a health condition escalates to the point of needing to seek emergency care, we all rely on quality emergency care to be there. In fact, the federal government demands it—unlike other doctors who can choose not to participate with various health insurance plans, Medicare or Medicaid, emergency physicians are required by federal law to treat every patient who walks through the door, regardless of their ability to pay. But, our emergency medical system is in crisis, and the severe problems facing emergency patients affect everyone.

Earlier this year, the American College of Emergency Physicians (ACEP) released its annual report card on emergency care. The nation was graded a C minus overall, with 90 percent of states earning mediocre or near-failing grades. America earned a near-failing D minus grade in the ''Access to Emergency Care'' category. This is unacceptable and also terrifying news for the more than 300,000 people each day who need emergency care.

Although my own state of Tennessee outperformed most states in some areas, we have a long way to go. The report states that Tennessee has only 8.9 emergency physicians per 100,000 people and needs an additional 60.2 full-time equivalent mental health care providers to serve the state's population. Also, it points out that these issues may contribute to hospital crowding and patient transfers, problems that have been identified as priorities among emergency physicians in Tennessee. Further, Tennessee has serious public health and injury prevention challenges. We have among the highest rates of infant mortality in the nation (8.9 deaths per 1,000 births), as well as high percentages of obese adults (28.8 percent) and adults who smoke (22.6 percent). Tennessee has relatively high fatal injury rates: 22.7 homicides and suicides per 100,000 people and 2.2 deaths due to unintentional fire and burn-related injuries per 100,000.

Although the ''Affordable Health Care for America Act'' included provisions to improve coverage for preventive and chronic care, statistics like these for Tennessee demonstrate that access to quality emergency care will always be a priority and should not be taken for granted.

The health care reform bill passed by the House on November 7 included a number of provisions that would strengthen emergency care in the United States:

Required Coverage for Emergency Services. Specifically, it would require that emergency services are part of any essential benefits package for all eligible health insurance plans.

Emergency Care Coordination Center. Section 2552 would establish an Emergency Care Coordination Center. The Center will promote and fund research in emergency medicine and trauma health care, promote regional partnerships and more effective emergency medical systems in order to enhance appropriate triage, distribution, and care of routine community patients; and promote local, regional, and State emergency medical systems' preparedness for and response to public health events. It would also authorize a Council of Emergency Medicine.

Pilot Programs to Improve Emergency Medical Care. Section 2553 would establish demonstration programs that design, implement, and evaluate innovative models of regionalized, comprehensive, and accountable emergency care systems.

Demonstration Project for Stabilization of Emergency Medical Conditions by Institutions for Mental Diseases. Section 1787 would establish a demonstration project to reimburse psychiatric hospitals that provide required medical assistance to stabilize an emergency medical condition for individuals enrolled in Medicaid.

Hopefully the emergency medicine provisions will be further strengthened as they move through the legislative process to include provisions based on legislation I've introduced to address the issue of emergency department boarding, ambulance division standards, and medical malpractice liability coverage for emergency providers and on-call specialists. The ''Access to Emergency Medical Services Act,'' H.R. 1188, and the ''Health Care Safety Net Enhancement Act,'' H.R. 1998, are two bills I've introduced to address these issues.

Overcrowded emergency departments are compromising patient safety and threatening everyone's access to lifesaving emergency care. The number of emergency departments has decreased by 5 percent in 10 years, but the demand for care is up by 32 percent—up to 119.2 million visits in 2006 (one in three Americans). Hundreds of emergency departments have closed.

According to the Centers for Medicare and Medicaid Services (CMS), half of emergency services go uncompensated. To compensate for cutbacks in reimbursement, hospitals closed 198,000 staffed beds between 1993 and 2003. As a result, fewer beds are available to accommodate admissions from the emergency department.

Ambulances are diverted, on average, once a minute in the United States, away from the closest emergency department because they are so crowded they cannot handle any more patients. For patients with life-threatening illnesses or injuries, those minutes can make the difference between life and death.

Last year, the American College of Emergency Physicians released a report by its Task Force on Boarding titled, ''Emergency Department Crowding: High-Impact Solutions.'' ACEP established the task force to develop low-cost or no-cost solutions to boarding. The report is intended to help emergency physicians stop boarding in their own hospitals and ultimately improve patient care. The report identifies those strategies to reduce crowding that have a ''high impact,'' as well as those that have not proven effective. The report identifies the boarding of admitted patients as the main cause of emergency department crowding. The report outlines the impact of boarding on patient care stating that ''evidence-based research demonstrates that boarding results in the following: delays in care, ambulance diversion, increased hospital lengths of stay, medical errors, increased patient mortality, financial losses to hospital and physician, and medical negligence claims.''
